

For sustainable manufacturing. We decided to start with our plants!

Environmentally-friendly products are becoming more common. But are the plants that make those also environmentally friendly? Murata's new manufacturing project is to build a plant that achieves just that! With a goal of using 100% renewable energy, we developed our own storage battery and power system. Our goal is to deliver this system to our plants worldwide we conduct many verification tests daily. For the sake of the environment, and to facilitate more technological advancements. Murata continues to tackle challenges.
